Summary

Graduate data scientist and healthcare AI practitioner with experience building Python analytics workflows, validating production data, documenting requirements, and translating technical results for varied stakeholders. Current work spans applied machine learning, healthcare analytics, bioinformatics, reproducible evaluation, and inclusive technical communication. Seeking to support clinical AI implementation through careful data analysis, process documentation, testing, and cross-functional collaboration.

Relevant Skills

Data analysis	Python, SQL, R, pandas, NumPy, SciPy, scikit-learn, structured data review, statistical analysis, data-quality validation
Business analysis	Requirements clarification, workflow documentation, stakeholder communication, acceptance-oriented testing, defect and result reporting
Healthcare and AI	Healthcare machine learning, hospital-readmission analytics, bioinformatics, clinical-data research, responsible and fairness-aware AI
Delivery	AWS, GCP, Docker, Git/GitHub, Linux/Unix, reproducible pipelines, structured logging, technical reports and presentations

Relevant Experience

Data Solutions Engineer <i>VEDADATA Inc.</i>	Sep 2022–Aug 2024 <i>New York, NY</i>
- Designed maintainable Python and pandas workflows for data ingestion, cleaning, preprocessing, validation, and analytics-ready delivery. - Built quality checks and statistical diagnostics to identify missing, inconsistent, and unusual information in production data workflows. - Collaborated across technical and nontechnical teams to clarify requirements, review outputs, document findings, and improve system reliability and usability.	
AI Data Solutions Engineer <i>VIOME Inc.</i>	Jan 2021–Sep 2022 <i>New York, NY</i>
- Developed healthcare-oriented machine-learning workflows for preprocessing, feature engineering, supervised-model experimentation, and evaluation. - Supported reproducible analytics and deployment-oriented data preparation in AWS environments for predictive health applications.	
Graduate Assistant, Quantum and AI Research <i>Rochester Institute of Technology, Software Engineering</i>	Fall 2025–Present <i>Rochester, NY</i>
- Build Python evaluation workflows for adaptive decision systems, including automated validation, structured logging, shared datasets, and reproducible experiment tracking. - Translate complex requirements and large-scale results into benchmark analyses, technical reports, presentations, and manuscript-ready artifacts.	
Computer Science Teacher Candidate <i>University of Rochester / Pine Brook Elementary School</i>	2025–Present <i>Rochester, NY</i>
Co-design accessible technical learning and communicate complex ideas through multiple formats for learners and collaborators with varied needs.	

Selected Healthcare and Data Projects

Hospital Readmission Analytics. Compared ensemble and regularized regression methods for clinical risk stratification, with structured preprocessing, evaluation, and interpretation.

Fairness-Aware Bioinformatics and Healthcare Analytics. Connected RNA-focused computational workflows, predictive modeling, and fairness assessment to evaluate technical performance and equitable outcomes.

Reproducible Data-System Evaluation. Built validation and reporting workflows that convert heterogeneous experiment outputs into comparison-ready datasets, diagnostics, and stakeholder-facing artifacts.

Education

M.S., Data Science , Rochester Institute of Technology	Expected December 2026
GPA: 3.9+; applied AI, bioinformatics, neural networks, and reproducible data systems	
M.S., Teaching Computer Science K–12 , University of Rochester	Expected December 2026
GPA: 3.9+; NSF Robert Noyce Scholar; Advanced Certificate in Leadership in Disability and Inclusive Practices	
M.S., Computer Science , Rochester Institute of Technology	2015
Artificial intelligence, big data analytics, and computer graphics	
B.S., Computer Engineering Technology , Farmingdale State College	2012
