Hiring Team
DeepBrain Technology

Re: Research Scientist / Research Fellow (AI for Education & Game Intelligence)

Dear DeepBrain Technology Hiring Team:

I am applying because this role connects the two areas I am deliberately bringing together: applied AI research and inclusive K–12 computer science education. I do not yet hold a Ph.D.; I am completing M.S. degrees in Data Science at Rochester Institute of Technology and Teaching Computer Science K–12 at the University of Rochester, both expected in December 2026, and I am preparing to begin doctoral study in Fall 2027. I offer more than ten years of professional engineering and data-systems experience, a completed M.S. in Computer Science, current AI research, and classroom-based teacher preparation as an experience-equivalency case for your consideration.

As a graduate assistant in RIT Software Engineering, I build reproducible Python evaluation workflows for adaptive decision systems in quantum-network routing. My work includes multi-armed, contextual, adversarial, and neural bandit methods; automated validation; structured experiment logging; benchmark analysis; and the translation of results into technical reports, presentations, and manuscript-ready artifacts. Earlier engineering roles developed my ability to build dependable data workflows, integrate machine learning into production systems, and collaborate across technical and nontechnical teams.

My education work gives that research a practical learning-sciences context. Through K–5 computer science teaching, middle-school science teaching, an environmental-science camp, and graduate study in inclusive and digitally rich teaching, I design standards-aligned learning with Universal Design for Learning, multiple participation pathways, and critical AI literacy. I am especially interested in research on adaptive feedback, student modeling, reasoning assessment, and the responsible use of AI as a learning partner.

I recognize that the posting requests a completed Ph.D. and a strong publication record. I would welcome consideration if DeepBrain is open to an applied-research candidate whose professional engineering experience, current graduate research, and K–12 teaching preparation provide an equivalent path into the work. I am available for remote collaboration during my final semester and would be interested in a long-term research relationship as I transition into doctoral study.

Thank you for considering this evidence-based equivalency case. I would value the opportunity to discuss where my AI research, technical execution, and education experience could contribute most effectively to DeepBrain's work.

Sincerely,
Piter Z. Garcia Bautista
