Hiring Team

NAFA Fleet Management Association

Re: Education Program Coordinator

Dear NAFA Hiring Team:

I am applying for the Education Program Coordinator position because it brings together my experience in education, cross-functional project delivery, technical communication, and data-informed improvement. I am completing M.S. degrees in Teaching Computer Science K–12 at the University of Rochester and Data Science at Rochester Institute of Technology, both expected in December 2026. I also bring more than ten years of professional engineering and data systems experience coordinating complex work across technical and nontechnical stakeholders.

My current education work includes a K–5 computer science teaching placement, middle-school science instruction, and an environmental-science camp developed with Freedom Scholars. Across these settings, I have co-designed and facilitated lessons, coordinated materials and activities, aligned instruction to clear goals, used student and mentor feedback to revise delivery, and created multiple pathways for learners to participate. My graduate preparation in teaching students with disabilities and digitally rich instruction further supports accessible, organized program delivery.

As a graduate assistant at RIT, I coordinate reproducible experiments, shared data, validation, documentation, and presentation artifacts for faculty-led AI research. In earlier engineering roles at VEDADATA and VIOME, I clarified requirements, tracked interdependent work, documented workflows and findings, reviewed outputs for quality, and communicated with colleagues who had different technical backgrounds. These experiences developed the careful follow-through, writing, problem solving, and service orientation required to support a professional education program.

I would welcome the opportunity to help NAFA coordinate educational content, communications, reporting, and program logistics while learning the fleet and mobility profession. I am based in the Eastern time zone and work effectively in distributed teams. I would also be glad to discuss scheduling expectations and advance notice for the position's periodic travel so I can plan responsibly around my final semester commitments.

Thank you for considering my application. I would value the opportunity to contribute my education, coordination, data, and technology experience to NAFA's professional-learning programs.

Sincerely,

Piter Z. Garcia Bautista
