Pure Tree Solutions LLC

Hiring Team

Re: Data Analyst

Dear Pure Tree Solutions Hiring Team,

I am applying for the remote Data Analyst position because it calls for the work I have repeatedly performed across industry and graduate research: turning complex data into reliable, decision-ready analysis through SQL, Python, quality checks, clear reporting, and close collaboration with technical and nontechnical stakeholders. I am completing an M.S. in Data Science at Rochester Institute of Technology in December 2026 and previously earned an M.S. in Computer Science.

At VEDADATA, I designed Python and pandas workflows for data ingestion, cleaning, preprocessing, validation, and analytics-ready delivery. I built maintainable AWS workflows and quality checks that improved the traceability, reliability, and usability of production data systems. At VIOME, I developed healthcare-oriented machine-learning workflows involving preprocessing, feature engineering, supervised-model experimentation, and evaluation. These roles strengthened my ability to investigate inconsistencies, document data processes, and translate operational questions into practical technical work.

My current graduate assistantship adds a rigorous research and reporting dimension. I build reproducible Python evaluation workflows for adaptive decision systems, using structured experiment logging, shared datasets, automated validation, statistical analysis, and comparison-ready reporting. I regularly turn large experimental outputs into visualizations, technical reports, and concise findings that faculty and collaborators can inspect and reuse. Across these projects, I work independently while keeping methods, limitations, and results transparent to the people who depend on them.

I would bring Pure Tree Solutions more than ten years of experience across software, data systems, and applied analytics; strong Python and SQL skills; and a consistent focus on data integrity, reproducibility, and clear communication. I would welcome the opportunity to help your clients build accurate analyses, maintain useful performance reporting, and make better decisions from their data.

Thank you for considering my application. I would be glad to discuss how my data-engineering, analytics, and research experience can support this role.

Sincerely,

Piter Z. Garcia Bautista
