Summary

Applied data science and machine learning professional with graduate research experience in AI-driven quantum network optimization and industry experience building Python analytics and data workflows in healthcare and production environments. Strong in data preparation, feature engineering, supervised learning, model evaluation, reproducible experimentation, and technical communication, with an additional foundation in inclusive CS education.

Technical Skills

Programming	Python, SQL, R, Java, C++, C#, JavaScript, Bash, MATLAB
Data and ML	pandas, NumPy, SciPy, scikit-learn, TensorFlow, Keras, PyTorch, XGBoost, statistical analysis, feature engineering, model evaluation
Visualization	Matplotlib, Plotly, Seaborn, technical reporting, presentation development
Systems	AWS, GCP, Docker, Git/GitHub, Linux/Unix, reproducible pipelines, structured logging
Research	Quantum network simulation, contextual and adversarial bandits, bioinformatics, fairness-aware ML

Experience

Graduate Assistant, Quantum and AI Research	Fall 2025–Present
--	-------------------

Rochester Institute of Technology, Software Engineering

Rochester, NY

- Build a Python multi-testbed framework for threat-aware quantum routing, online path selection, and qubit allocation using multi-armed, contextual, adversarial, and neural bandit methods.
- Develop comparison-ready evaluation workflows across stochastic and adversarial environments, with automated validation, structured logging, shared datasets, and reproducible experiment tracking.
- Translate large-scale experiments into benchmark analyses, technical reports, and manuscript-ready artifacts for faculty-led publication work.

Data Solutions Engineer

Sep 2022–Aug 2024

VEDADATA Inc.

New York, NY

- Designed Python data pipelines and analytics workflows for business applications, emphasizing ingestion, cleaning, preprocessing, validation, and downstream analytics readiness.
- Built maintainable AWS workflows and quality checks that improved the traceability, reliability, and usability of production data systems.

AI Data Solutions Engineer

Jan 2021–Sep 2022

VIOME Inc.

New York, NY

- Developed Python machine learning workflows for healthcare use cases, including preprocessing, feature engineering, supervised model experimentation, and evaluation.
- Supported reproducible model development and deployment-oriented data preparation in AWS-based environments.

Computer Science Teacher Candidate

2025–Present

University of Rochester / Pine Brook Elementary School

Rochester, NY

- Co-design standards-aligned learning in coding, robotics, digital fluency, and responsible AI; use UDL supports to make technical ideas accessible to varied learners and collaborators.

Selected Applied Work

Quantum Network Path Optimization. Built reproducible simulation and evaluation workflows for adaptive decision-making under noisy, adversarial, and resource-constrained conditions.

Fairness-Aware Bioinformatics and Healthcare Analytics. Connected hospital-readmission modeling, RNA-focused computational workflows, and fairness assessment to evaluate predictive performance and equitable outcomes together.

Education

M.S., Data Science , Rochester Institute of Technology	Expected December 2026
---	------------------------

GPA: 3.9+; focus in applied AI, bioinformatics, neural networks, and reproducible data systems

M.S., Teaching Computer Science K–12 , University of Rochester	Expected December 2026
---	------------------------

GPA: 3.9+; NSF Robert Noyce Scholar; Advanced Certificate in Leadership in Disability and Inclusive Practices

M.S., Computer Science , Rochester Institute of Technology	2015
---	------

Concentrations in artificial intelligence, big data analytics, and computer graphics

B.S., Computer Engineering Technology , Farmingdale State College	2012
--	------

Recognition

NSF Robert Noyce Scholar (2024–2026) | IEEE Alumni Member (2009–Present) | RIT/MESCYT merit-based graduate funding
