Hiring Team
LearningMate

Re: Subject Matter Expert

Dear LearningMate Hiring Team:

I am applying for the remote Subject Matter Expert opportunity because it brings together the work I am already doing across K–12 computer science education, mathematics and data science, inclusive curriculum design, and applied AI. I am completing master's degrees in Teaching Computer Science K–12 at the University of Rochester and Data Science at Rochester Institute of Technology, both expected in December 2026. I also hold an M.S. in Computer Science.

My strongest subject areas are mathematics, computer science, data science, AI, robotics, and interdisciplinary STEM. In my teacher-candidate work, I co-design standards-aligned learning in coding, robotics, digital fluency, and responsible AI. I develop and revise lessons, activities, prompts, and assessments with Universal Design for Learning supports so varied learners can access complex ideas and demonstrate understanding in fair ways. My Advanced Certificate in Leadership in Disability and Inclusive Practices further grounds that work in accessibility and disability inclusion.

I also bring substantial technical-content experience. As a graduate assistant, I build and document reproducible Python experiments for AI-driven quantum-network optimization, review results for accuracy, and translate complex methods into reports and presentation materials. Earlier data and AI engineering roles strengthened my ability to collaborate across teams, work through structured review cycles, and produce clear, dependable technical artifacts.

I am available now for remote part-time, freelance, or contract engagement that can continue alongside my graduate programs. I am especially interested in curriculum and assessment development, content review and validation, and AI-assisted educational workflows for Grades 3–12. After graduating in December 2026, I will also be open to broader full-time opportunities and relocation.

Thank you for considering my application. I would welcome the opportunity to support LearningMate's K–12 projects with both subject depth and an inclusive, learner-centered approach.

Sincerely,

Piter Z. Garcia Bautista
